## UTKALMANI GOPABANDHU INSTITUTE OF ENGINEERING, ROURKELA

## **LESSON PLAN 2024 - 2025**

**DEPARTMENT OF MATH & SCIENCE** 

## **LESSON PLAN**

SUBJECT CODE: Th.2

NAME: BISWABANDITA BARIK

**BRANCH: MATH & SCIENCE** 

**SUBJECT: PHYSICS** 

NUMBER OF MODULES: 6

CLASSES REQUIRED: 60

PRE-REQUISITE: To understand the basic principles of science and technology.

Physics strengthens quantitative reasoning and problem solving skills that are valuable in areas beyond physics. Students who study physics or engineering physics are prepared to work on forefront

ideas in science and technology.

SL. NO	TOPIC	NO. OF PERIOD TAKEN	SIGN.
1	UNIT -1		
2	Physical quantity and classification as derived and fundamenta physical quantity	1	
3	Units and systems of units	1	
4	Defination of dimension and dimensional formula of different physical quantity	1	
5	Dimensional equations and their applications	2	
6	Measuring Instruments	1	
7	Error and error propagation	1	
8	significant figures.	1	
9	Numericals discussion	1	
10	UNIT - 2		
11	Scalar and vector quantities types of vector.  Examples	1	
12	Tringle and parallelogram law of vector addition Numericals discussion	1	
13	Scalar and vector product	1	
14	Resolution of a Vector and its application to inclined plane and lawn roller	1	
15	Momentum, Statement and derivation of conservation of linear momentum	1	
16	Application of conservation of linear momentum	1	
17	Circular motion, definition of angular displacement, angular velocity, angular acceleration	1	

Relation between linear and angular velocity, linear acceleration and angular acceleration (related numerical)  19 Centripetal and Centrifugal forces with live examples 20 applications such as banking of roads and bending of cyclist.  21 Class Test 1   22 UNIT -3  23 Work: Concept and units, examples of zero work, positive work and negative work 24 Friction: concept, types, laws of limiting friction, 25 coefficient of friction, reducing friction and application 26 Workdone in moving an object on horizontal and inclined plane for rough and plane surfaces and related applications 27 Energy and its units, kinetic energy, gravitational potential energy with examples and derivation mechanical energy, gravitational potential energy for freely falling bodies. trans- formation of energy 29 Power and its units, power and work relationship, calculation of power 30 Numericals discussion 31 Unit 4: 32 Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples, 33 Conservation of angular momentum (quantitative) andits applications. 34 Moment of inertia and its physical significance, radius of gyration for rigid body 35 Theorems of parallel and perpendicular axes 36 Moment of inertia of rod, disc, ring and sphere 37 Class Test 38 In Class Test				
angular acceleration (related numerical)  19 Centripetal and Centrifugal forces with live examples 20 applications such as banking of roads and bending of cyclist.  21 Class Test 22 UNIT -3  23 Work: Concept and units, examples of zero work, positive work 24 And negative work  25 coefficient of friction, reducing friction and application  26 Workdone in moving an object on horizontal and inclined plane 27 for rough and plane surfaces and related applications  28 Energy and its units, kinetic energy, gravitational potential energy 29 with examples and derivation 30 Numericals discussion  31 Unit 4:  32 Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples, Definition of torque and its physical significance, radius of gyration for rigid body  36 Moment of inertia and its physical significance, radius of gyration for frigid body  1	18		1	
20 applications such as banking of roads and bending of cyclist.  21 Class Test  22 UNIT -3  Work: Concept and units, examples of zero work, positive work and negative work  23 Friction: concept, types, laws of limiting friction,  25 coefficient of friction, reducing friction and application  26 Workdone in moving an object on horizontal and inclined plane for rough and plane surfaces and related applications  27 Energy and its units, kinetic energy, gravitational potential energy with examples and derivation  28 mechanical energy, conservation of mechanical energy for freely falling bodies. trans- formation of energy  29 Power and its units, power and work relationship, calculation of power  30 Numericals discussion  31 Unit 4:  32 Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples,  30 Definition of torque and angular momentum and their examples,  31 Definition of torque and angular momentum and their examples,  32 Conservation of angular momentum (quantitative) andits applications.  33 Moment of inertia and its physical significance, radius of gyration for rigid body  34 Theorems of parallel and perpendicular axes  35 Moment of inertia of rod, disc, ring and sphere		angular acceleration (related numerical)	_	
21 Class Test 1 22 UNIT -3  Work: Concept and units, examples of zero work, positive work and negative work  24 Friction: concept, types, laws of limiting friction,  25 coefficient of friction, reducing friction and application  26 Workdone in moving an object on horizontal and inclined plane for rough and plane surfaces and related applications  27 Energy and its units, kinetic energy, gravitational potential energy with examples and derivation mechanical energy, conservation of mechanical energy  28 Fower and its units, power and work relationship, calculation of power  29 Power and its units, power and work relationship, calculation of power  30 Numericals discussion  31 Unit 4:  32 Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples,  33 Conservation of angular momentum (quantitative) andits applications.  4 Moment of inertia and its physical significance, radius of gyration for rigid body  35 Theorems of parallel and perpendicular axes  4 Moment of inertia of rod, disc, ring and sphere	19	Centripetal and Centrifugal forces with live examples	1	
22 UNIT -3  Work: Concept and units, examples of zero work, positive work and negative work  24 Friction: concept, types, laws of limiting friction, 25 coefficient of friction, reducing friction and application  26 Workdone in moving an object on horizontal and inclined plane for rough and plane surfaces and related applications  27 Energy and its units, kinetic energy, gravitational potential energy with examples and derivation mechanical energy, conservation of mechanical energy  28 mechanical energy, conservation of mechanical energy for freely falling hodies. trans- formation of energy  29 Power and its units, power and work relationship, calculation of power  30 Numericals discussion  1 Unit 4:  32 Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples,  33 Conservation of angular momentum (quantitative) andits applications.  4 Moment of inertia and its physical significance, radius of gyration for rigid body  35 Theorems of parallel and perpendicular axes  Moment of inertia of rod, disc, ring and sphere  1 1	20	applications such as banking of roads and bending of cyclist.	1	
Work: Concept and units, examples of zero work, positive work and negative work  24 Friction: concept, types, laws of limiting friction, 25 coefficient of friction, reducing friction and application  26 Workdone in moving an object on horizontal and inclined plane for rough and plane surfaces and related applications  27 Energy and its units, kinetic energy, gravitational potential energy with examples and derivation  28 mechanical energy, conservation of mechanical energy for freely falling bodies. trans- formation of energy  29 Power and its units, power and work relationship, calculation of power  30 Numericals discussion  31 Unit 4:  32 Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples, Definition of inertia and its physical significance, radius of gyration for rigid body  35 Theorems of parallel and perpendicular axes  Moment of inertia of rod, disc, ring and sphere  1	21	Class Test	1	
and negative work  24 Friction: concept, types, laws of limiting friction, 25 coefficient of friction, reducing friction and application  26 Workdone in moving an object on horizontal and inclined plane for rough and plane surfaces and related applications  27 Energy and its units, kinetic energy, gravitational potential energy with examples and derivation  28 mechanical energy, conservation of mechanical energy for freely falling bodies. trans- formation of energy  29 Power and its units, power and work relationship, calculation of power  30 Numericals discussion  31 Unit 4:  32 Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples, Definition of angular momentum (quantitative) andits applications.  34 Moment of inertia and its physical significance, radius of gyration for rigid body  35 Theorems of parallel and perpendicular axes  36 Moment of inertia of rod, disc, ring and sphere	22	UNIT -3		
and negative work  24 Friction: concept, types, laws of limiting friction, 25 coefficient of friction, reducing friction and application  26 Workdone in moving an object on horizontal and inclined plane for rough and plane surfaces and related applications  27 Energy and its units, kinetic energy, gravitational potential energy with examples and derivation  28 mechanical energy, conservation of mechanical energy for freely falling bodies. trans- formation of energy  29 Power and its units, power and work relationship, calculation of power  30 Numericals discussion  31 Unit 4:  32 Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples, Definition of inertia and its physical significance, radius of gyration for rigid body  35 Theorems of parallel and perpendicular axes  1 Moment of inertia of rod, disc, ring and sphere	22	Work: Concept and units, examples of zero work, positive work	1	
25 coefficient of friction, reducing friction and application  26 Workdone in moving an object on horizontal and inclined plane for rough and plane surfaces and related applications  27 Energy and its units, kinetic energy, gravitational potential energy with examples and derivation  28 mechanical energy, conservation of mechanical energy for freely falling bodies, trans- formation of energy  29 Power and its units, power and work relationship, calculation of power  30 Numericals discussion  31 Unit 4:  32 Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples, Definition of angular momentum (quantitative) andits applications.  34 Moment of inertia and its physical significance, radius of gyration for rigid body  35 Theorems of parallel and perpendicular axes  36 Moment of inertia of rod, disc, ring and sphere  1	23	and negative work	1	
Workdone in moving an object on horizontal and inclined plane for rough and plane surfaces and related applications  Energy and its units, kinetic energy, gravitational potential energy with examples and derivation  mechanical energy, conservation of mechanical energy for freely falling bodies, trans- formation of energy  Power and its units, power and work relationship, calculation of power  Numericals discussion  1  Unit 4:  Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples, Conservation of angular momentum (quantitative) andits applications.  Moment of inertia and its physical significance, radius of gyration for rigid body  Theorems of parallel and perpendicular axes Moment of inertia of rod, disc, ring and sphere	24	Friction: concept, types, laws of limiting friction,	1	
for rough and plane surfaces and related applications  Energy and its units, kinetic energy, gravitational potential energy with examples and derivation mechanical energy, conservation of mechanical energy for freely falling bodies. trans- formation of energy  Power and its units, power and work relationship, calculation of power  Numericals discussion  1  Unit 4:  Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples, Conservation of angular momentum (quantitative) andits applications.  Moment of inertia and its physical significance, radius of gyration for rigid body  Theorems of parallel and perpendicular axes Moment of inertia of rod, disc, ring and sphere	25	coefficient of friction, reducing friction and application	1	
for rough and plane surfaces and related applications  Energy and its units, kinetic energy, gravitational potential energy with examples and derivation  mechanical energy, conservation of mechanical energy for freely falling bodies. trans- formation of energy  Power and its units, power and work relationship, calculation of power  Numericals discussion  1  Unit 4:  Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples, Definition of angular momentum (quantitative) andits applications.  Moment of inertia and its physical significance, radius of gyration for rigid body  Theorems of parallel and perpendicular axes  Moment of inertia of rod, disc, ring and sphere	26	Workdone in moving an object on horizontal and inclined plane	4	
with examples and derivation mechanical energy, conservation of mechanical energy for freely falling bodies, trans- formation of energy  Power and its units, power and work relationship, calculation of power  Numericals discussion  Unit 4:  Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples, Conservation of angular momentum (quantitative) andits applications.  Moment of inertia and its physical significance, radius of gyration for rigid body  Theorems of parallel and perpendicular axes  Moment of inertia of rod, disc, ring and sphere	26	for rough and plane surfaces and related applications	1	
with examples and derivation mechanical energy, conservation of mechanical energy for freelv falling bodies. trans- formation of energy  Power and its units, power and work relationship, calculation of power  Numericals discussion  Individual Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples, Conservation of angular momentum (quantitative) andits applications.  Moment of inertia and its physical significance, radius of gyration for rigid body  Theorems of parallel and perpendicular axes  Moment of inertia of rod, disc, ring and sphere	27	Energy and its units, kinetic energy, gravitational potential energy	1	
for freely falling bodies, trans- formation of energy  Power and its units, power and work relationship, calculation of power  Numericals discussion  In the control of the			1	
for freely falling bodies, trans- formation of energy  Power and its units, power and work relationship, calculation of power  1  Numericals discussion  1  1  1  1  1  1  1  1  1  1  1  1  1	28	mechanical energy, conservation of mechanical energy	1	
Numericals discussion  1  31 Unit 4:  Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples,  Conservation of angular momentum (quantitative) andits applications.  Moment of inertia and its physical significance, radius of gyration for rigid body  Theorems of parallel and perpendicular axes  Moment of inertia of rod, disc, ring and sphere  Numericals discussion  1  1  21  22  Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples,  1  33  Conservation of angular momentum (quantitative) andits applications.  1  34  Moment of inertia and its physical significance, radius of gyration for rigid body  1  35  Moment of inertia of rod, disc, ring and sphere		for freely falling bodies, trans- formation of energy		
Numericals discussion  1 31 Unit 4:  Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples, Conservation of angular momentum (quantitative) andits applications.  Moment of inertia and its physical significance, radius of gyration for rigid body  Theorems of parallel and perpendicular axes  Moment of inertia of rod, disc, ring and sphere  1	29	Power and its units, nower and work relationship, calculation of nower	1	
31 Unit 4:  Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples,  Conservation of angular momentum (quantitative) andits applications.  Moment of inertia and its physical significance, radius of gyration for rigid body  Theorems of parallel and perpendicular axes  Moment of inertia of rod, disc, ring and sphere  Moment of inertia of rod, disc, ring and sphere	30		1	
Rotational Motion: Translational and rotational motions with examples, Definition of torque and angular momentum and their examples,  Conservation of angular momentum (quantitative) andits applications.  Moment of inertia and its physical significance, radius of gyration for rigid body  Theorems of parallel and perpendicular axes  Moment of inertia of rod, disc, ring and sphere				
Definition of torque and angular momentum and their examples,  Conservation of angular momentum (quantitative) andits applications.  Moment of inertia and its physical significance, radius of gyration for rigid body  Theorems of parallel and perpendicular axes  Moment of inertia of rod, disc, ring and sphere	31			
Conservation of angular momentum (quantitative) andits applications.  Moment of inertia and its physical significance, radius of gyration for rigid body  Theorems of parallel and perpendicular axes  Moment of inertia of rod, disc, ring and sphere  1	32	•	1	
Moment of inertia and its physical significance, radius of gyration for rigid body  Theorems of parallel and perpendicular axes  Moment of inertia of rod, disc, ring and sphere  1	22			
for rigid body  Theorems of parallel and perpendicular axes  Moment of inertia of rod, disc, ring and sphere  1	33		1	
Theorems of parallel and perpendicular axes 1  Moment of inertia of rod, disc, ring and sphere 1	34		1	
36 Moment of inertia of rod, disc, ring and sphere 1				
37 Class Test 1	36		1	
	37	Class Test	1	

38	UNIT -5		
39	Elasticity: definition of stress and strain and its type, Hooke's law	1	
40	Hooke's law, significance of stress-strain curve.	1	
41	Pressure: definition, units, atmospheric pressure,	1	
42	gauge pressure, absolute pressure, Fortin's Barometer and	2	
	its applications and numericals		
43	Surface tension: concept, units, cohesive and adhesive forces,	1	
	angle of contact, Ascent Formula	1	
44	applications of surface tension, effect of temperature and	1	
44	impurity on surface tension.		
45	Viscosity and coefficient of viscosity, Terminal velocity	1	
46	Stoke's law and effect of temperature on viscosity,	1	
40	application in hydraulic systems		
47	Hydrodynamics: Fluid motion, stream line and turbulentflow	1	
48	Reynold's number Equation of continuity,	1	
40	Bernoulli's Theorem and its applications.		
49	Numericals discussion	1	
50	UNIT -6		
51	Concept of heat and temperature, modes of heat transfer	1	
52	specific heats, scales of temperature and their relationship	1	
F2	Types of Thermometer (Mercury thermometer, Bimetallic thermometer,	2	
53	Platinum resistance thermometer, Pyrometer) and their uses. )	2	
54	Expansion of solids, liquids and gases	1	
	coefficient of linear, surface and cubical expansions and	1	
55	relation amongst them,	1	
56	Co-efficient of thermal conductivity, engineering applications	1	

57	Class Test(Oral) and Numerical discussion	1	
58	REVISION UNIT -1 TO UNIT - 2	2	
59	REVISION UNIT -3 TO UNIT - 4	2	
60	REVISION UNIT -5 TO UNIT -6	2
